

Worksheet 5/7 on Singular Subject Verb Agreement

Mini Lesson

**Definition**

When we write a singular noun we must also write a singular verb. When we write a plural noun, we usually add "s", "es" or "ies". When we write the plural verb, we usually take off the "s". When we write a singular verb, we usually add "s".

**Example**

A bark beetle chews through the bark of the tree.

"*beetle*" is a singular subject and "*chews*" is a singular verb. (note the "s" on the singular verb)

**Directions**

Write "c" if the correct verb has been used in the sentence or write "w" if the verb is wrong.

1 An insect, less than half a centimeter long, threatens the life of a tree. c

2 A bark beetle destroy stands of trees.

3 Its scientific name, *dendroctonus*, means "tree killer".

4 The tree are a source of food and shelter for the bark beetle.

5 The mother beetle chew and tunnel between the bark and the wood.

6 She lays her eggs in between the bark and the wood.

7 Larvae hatch from the eggs and eat out their own tunnels.

8 This destroys tree tissues and causes branches to wither and dies.

9 Bark beetles cause the death of many trees. When there are fewer trees to feed on, the beetle population declines and the forest can recover.

10 The numbers of most organisms are limited by food supply.
